

D R Y S O C D O C Algorithms: Linear private data.

DRYBEDOCTM algorithms can not be decyphered by numerical computation.

Two unique, infinitely variable, directional data, algorithms : Alphabetic-Geometric : that may, or may not, agree in value. If they do; information. If they do not; no information. Each algorithm is naturally a no-overlay-one-time-pad. Existing characters can not be removed or substituted; additional characters can not be added. Any alteration effects the dual agreement and will be detected.

Each DRYBEDOCTM algorithm has a unique solution formula.

D R Y S O C D O C algorithm formula:
"Solve the message"

DRYBEDOCTM data can be produced algorithmically in unlimited quantity;
DRYBEDOCTM algorithms can be delivered in many different styles and reproduced for
solution by D R Y S O C D O C algorithm formula.

The following four styles can be algorithmized with the same information.

1. Blank - No characters transfer
2. Single character -
3. DRYBEDOCTM square = 169 characters

Two unique precision joined algorithms,
 ALPHABETICALLY & ALPHABETICALLY,
 that agree in one value.

This message bearing, natural no-overlay-one-time-pad,
 DRYBODOC GOOR TUNM
 contains approximately 33,400 characters and delivers 15 characters of value.

One a b c d e f g h i j k l m n o p q r s t u v w x y z .

DRYBODOC (M80L LQJGJNAGB
 removes ionizes creation, transmission, translation
 and storage of information.
